ND COVID-19

[PURPOSE OF USE]

ND COVID-19 Ag test is a rapid chromatographic immunoassay for the detection of specific antigens to SARS-CoV-2 present in human nasopharynx. This test is administered by healthcare workers and lab only, as an aid to early diagnosis of SARS-CoV-2 infection in patients with clinical symptoms with SARS-CoV-2 infection. It provides rapid, easy-to-use test results. More specific alternative diagnostic methods should be performed in order to obtain the confirmation of SARS-CoV-2 infection.
