GLOBAL Corporation Installation Instructions Installation of A-Series™ Accessories

Accessory Stacking Recommendations

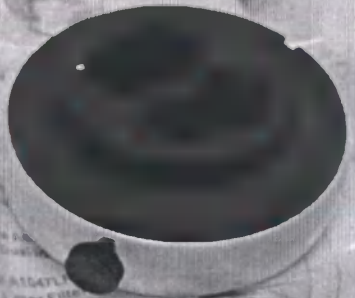

When stacking accessories on the binocular body, refer to the following figures and necessary stacking recommendations.

MOST IMPORTANTLY, the M A1067L
Must be placed in the black opening of the binocular body.

1. The binocular body must be placed in the black opening of the binocular body.

The M A1067L is any position after above, but it is recommended to be placed directly below the binocular body (above the microscope body (above the iris if equipped) to keep stability high.

The M A1017 Carr Binoculars to be placed directly below the binocular body, unless a Rotation Ring is present, then it should be placed below the Rotation Ring. This provides the least amount of off-axis weight toward the user, thus keeping system stability high.

Installation Instructions

CLEARLIGHT OBJECTIVE

For your reference, please read the following instructions carefully before using the Clearlight AP objective lens. The Clearlight AP objective lens is designed for use with the Clearlight AP microscope.

1. Remove the Clearlight AP objective lens from the protective plastic bag.

2. Check the objective lens for any damage or debris.

3. Clean the objective lens with a lint-free cloth.

4. Insert the objective lens into the microscope.

5. Face the objective lens.

6. Face the patient.

7. Insert the Clearlight AP under the objective lens.
