

A Fully Rigid Remodeling Ring with a Physiologic Mitral Valve Shape

A black and white photograph of a Profile 3D Annuloplasty Ring. The ring is a thick, textured, C-shaped band that mimics the natural shape of a mitral valve annulus. It is positioned against a dark background, with a light-colored, curved surface visible on the left and right sides, suggesting it is being held or displayed in a clinical or laboratory setting.

The Profile 3D™ Annuloplasty Ring can be used to treat functional mitral valve diseases, such as ischemic mitral regurgitation and dilated cardiomyopathy.
