ARCHITECT i Theophylline Reagent

Chemiluminescent microparticle immunoassay (CMIA) for the quantitative measurement of theophylline in human serum or plasma on the ARCHITECT i System with STAT protocol capability.

- **MICROPARTICLES** Anti-theophylline (mouse, monoclonal) coated goat anti-mouse (GAM) microparticles in TRIS buffer with protein (bovine) stabilizer. Minimum Concentration: 0.2% solids. Preservative: ProClin 300.
- **CONJUGATE** Theophylline acridinium-labeled conjugate in MES buffer with surfactant. Preservative: ProClin 300.

iTheophylline Calibrators

INTENDED USE

ARCHITECT iTheophylline Calibrators
For the calibration of the ARCHITECT i System with 2000 and 2500 analyzers
Calibrators which used for the quantitative determination of Theophylline in
human serum or plasma
• CAL A: Contains normal human serum
• CAL B: CAL F: Contains human serum spiked with Theophylline
Preparation and storage instructions are provided in the accompanying insert
Each bottle contains 10 mL of calibrator. Shelf life: 6 months (25°C)

For In Vitro Diagnostic Use. The ARCHITECT Sirolimus Calibrators are for the calibration of the ARCHITECT i System when used for the quantitative determination of sirolimus in human whole blood.

6 Bottles (Calibrator A 9.0 mL, Calibrators B-F 4.5 mL each) of ARCHITECT Sirolimus Calibrators. Calibrator A contains additional volume to enable its usage as a diluent for out of range specimens (see Dilution Information section of the reagent package insert). Calibrators A through F are prepared with processed human whole blood. Calibrators B through F contain sirolimus. The calibrators yield the following concentrations (ng/mL).

CAL A	0	CAL B	3	CAL C	6
CAL D	12	CAL E	20	CAL F	30

Preservatives: sodium azide and antimicrobial agents
