AlphaLoC Abutment + TiN Coating
 Instructions for use for AlphaLoC
 & Insertion tool

Description

The AlphaLoC abutment is part of an elastic retaining system for the construction of dental prostheses.

AlphaLoC Kit contents: 1 titanium AlphaLoC abutment (with Implant screw diameter of 1.8 mm and 2.5 mm) - Abutments are available in different heights, with each measuring between 0.5 and 7.0 mm (0.5, 1, 2, 3, 4, 5, 6 mm). Each kit contains one abutment of the height specified in the order (the dentist / technician must select the proper height for each case), 4 assorted retention caps, stainless steel laboratory cap, 1 tube, 1 protective disk.

Technical specifications

AlphaLoC Abutment for Implants:

Titanium alloy with TiN coating single overdenture abutment is screwed onto endosseous implants; retention is ensured by an elastic cap that goes over the sphere's equator. The vertical dimension has been reduced to obtain a smaller attachment.

RETENTION CAPS: Different retaining abilities allow the dentist to select the retention to be selected.

Made of nylon and/or Acetal resin, with different elastic properties delivering different retention loads.

PURPLE - Strong retention (1.5 Kg)
