NOTE 1 Data should only be entered in one of the columns related to TIS.

NOTE 2 Information need not be provided regarding TIC for any transducer assembly not intended for transcranial or neonatal capital uses.

NOTE 3 If the requirements of 201.12.4.4 are met, it is not required to enter any data in the column related to TIC, TIB or TIC.

NOTE 4 If the requirements of 201.12.4.4b are met, it is not required to enter any data in the column related to TIC.

NOTE 5 Focus Length is a 1000Hz value.

## 1.3 Таблица акустической мощности (если отображение TI производится в соответствии с IEC 62359 ред.2)

### 1.3.1 Точность отображения MI/TI

Механический индекс  $MI$  зависит от пикового акустического давления разряжения с учётом затухания,  $p_{r,e}$ . Точность отображения механического индекса должна быть связана с погрешностью измерений  $p_{r,e}$ .

Температурный индекс  $TI$  зависит от общей мощности  $P$  и ослабленной максимальной в пространстве и усредненной во времени интенсивности  $I_{spt,e}$ . Точность отображения температурных индексов должна быть связана с погрешностью измерений  $P$  и  $p_{r,e}$ .

Точность отображения  $MI/TI$  приведена для каждой таблицы акустического выходного сигнала.

### 1.3.2 Символы, используемые в таблице акустического выходного сигнала

Список символов в таблице акустической выходной мощности согласно IEC 61157 4.2.2

| Максимальная мощность  | усредненная во времени максимальная выходная мощность (максимальная мощность) (мВт)                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $p_{-}$                | пиковое акустическое давление расширения, измеренное в воде (МПа)                                                                                                                                                                         |
| $I_{ob}$               | интенсивность выходного луча (мВт/см <sup>2</sup> )                                                                                                                                                                                       |
| $I_{spta}$             | максимальная в пространстве и усредненная во времени интенсивность, измеренная в воде (мВт/см <sup>2</sup> )                                                                                                                              |
| $Z_p$                  | расстояние от выходной поверхности датчика до точки максимального квадратичного интегрального значения импульсного давления (или максимального среднего квадратичного акустического давления для систем с незатухающими колебаниями) (мм) |
| $Z_{tt}$               | расстояние от датчика до выходной поверхности датчика (мм)                                                                                                                                                                                |
| $Z_{ts}$               | типичное значение расстояния удаления датчика (мм)                                                                                                                                                                                        |
| $w_{pb6} (  )$         | ширина -6-дБ импульсного луча в точке максимального квадратичного интегрального значения импульсного давления для параллельного направления (мм)                                                                                          |
| $w_{pb6} (\perp)$      | ширина -6-дБ импульсного луча в точке максимального квадратичного интегрального значения импульсного давления для перпендикулярного направления (мм)                                                                                      |
| $prr$ (PRF)            | скорость (частота) повтора импульса (Гц)                                                                                                                                                                                                  |
| $srr$                  | Частота повторного сканирования (Гц)                                                                                                                                                                                                      |
| Размеры выходного луча | размеры выходного луча (мм) X, Y                                                                                                                                                                                                          |
| $f_{awf}$              | акустическая рабочая частота (МГц)                                                                                                                                                                                                        |

Список символов в IEC 60601-2-37 (2015) Таблица 201.103

| Термин           | Полная расшифровка                                                             |
|------------------|--------------------------------------------------------------------------------|
| $\alpha$         | коэффициент акустического затухания                                            |
| $f_{awf}$        | акустическая рабочая частота                                                   |
| $I_{pa, \alpha}$ | ослабленная средняя интенсивность импульса                                     |
| $I_{spta}$       | максимальная в пространстве и усредненная во времени интенсивность             |
| $I_{spta, a}$    | ослабленная максимальная в пространстве и усредненная во времени интенсивность |
| $MI$             | механический индекс                                                            |
| $n_{pps}$        | количество импульсов на строку ультразвуковой развертки                        |
| $P$              | выходная мощность                                                              |
| $P_{1 \times 1}$ | выходная мощность в ограниченном квадрате                                      |

Данные по акустической мощности

| Термин       | Полная расшифровка                                                |
|--------------|-------------------------------------------------------------------|
| $p_r$        | пиковое акустическое давление разрежения                          |
| $p_{r, a}$   | ослабленное пиковое акустическое давление расширения              |
| $p_{ii}$     | интеграл интенсивности импульса                                   |
| $p_{rr}$     | скорость повтора импульса                                         |
| $s_{rr}$     | частота повторного сканирования                                   |
| $TI$         | тепловой индекс                                                   |
| $TIB$        | тепловой индекс костей                                            |
| $TIC$        | тепловой индекс костей черепа                                     |
| $TIS$        | тепловой индекс мягких тканей                                     |
| $z$          | расстояние от источника до заданной точки                         |
| $z_b$        | глубина для $TIB$                                                 |
| $z_s$        | глубина для $TIS$                                                 |
| $Z_{MI}$     | глубина для механического индекса                                 |
| $Z_{pii}$    | глубина для интеграла интенсивности пикового импульса             |
| $Z_{pii, a}$ | глубина для интеграла ослабленной интенсивности пикового импульса |

Таблицы акустической мощности (Таблица 201.103) приведены для всех датчиков в каждом режиме, независимо от значения  $TI$  и  $MI$ .

Значения 1,0 для  $MI$  и  $TI$  не должны быть превышены в любом рабочем состоянии для следующих датчиков:

- C41L47RP(L)

### 1.3.3 Таблица акустического выходного сигнала

#### (1) Электронные конвексные датчики

Acoustic output data in accordance with IEC 61157/A2.2, accompanying literature

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to MT.

NOTE 6 "+" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to ML.

NOTE: "—" indicates cells where a numerical value should be entered. The equipment setting related to the value has to be entered in the operating control section.

Acoustic output data in accordance with IEC 61157/4.2.2, accompanying literature

ARIETTA 50

C253

Acoustic power is controllable by the user.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TIC.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_p$                       | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TIC.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_p$                       | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Index should be entered at surface and below surface both in the columns related to TTS or T7B.

NOTE 3 Index should be entered at surface and below surface both in the columns related to TTS or T7B.

NOTE 4 If the requirements of 201:12.4.2(a) are not, it is not required to enter any data in the columns related to TTS, T7B or T7C.

Данные по акустической мощности

ARIETTA 50

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amd.1)

| Transducer Model       |                                     | C253                  |               | MODE   |            | B/PWD-mode    |          |
|------------------------|-------------------------------------|-----------------------|---------------|--------|------------|---------------|----------|
| Index Label            |                                     | TTS                   |               | MI     | TIB        |               | TTC      |
| Maximum Index Value    |                                     | at surface            | below surface |        | at surface | below surface |          |
| Index Component Value  |                                     | 0.50                  | 0.84          | 1.6    | 0.51       | 2.9           | 1.7      |
| Acoustic Parameters    | $P_{rms}$                           |                       |               | 2.3    |            |               |          |

| Triplets VFL Range     |                                     |                       | n/a           | n/a    | n/a        | n/a           |          |
| Pulse Area Lock        |                                     |                       | n/a           | n/a    | n/a        | n/a           |          |

NOTE 1: Only use operating condition per index.

NOTE 2: Data should be entered for all surface and below surface balls in the columns related to TIB or TTS.

NOTE 3: Determination need to be entered for all surface and below surface balls in the columns related to B/Pw or THI(0mT).

NOTE 4: If the information need to be entered for all surface and below surface balls in the columns related to TTS, TIB or TTC.

NOTE 5: If the information of 201.12, 201.20 cm need, it is not required to enter any data in the column related to MI.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating field section.

ARIETTA 50

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amd.1)

| Transducer Model      |  | C253 |  | MODE |  | B+CalerD-mode |  |     |  |
|-----------------------|--|------|--|------|--|---------------|--|-----|--|
| Index Label           |  | MT   |  | TTS  |  | TTB           |  | TTC |  |
| Maximum Index Value   |  | 1.6  |  | 0.85 |  | 3.0           |  | 1.7 |  |

NOTE 222: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 223: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 224: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 225: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 226: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 227: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 228: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 229: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 230: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 231: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 232: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 233: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 234: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 235: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 236: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 237: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 238: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 239: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 240: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 241: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 242: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 243: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 244: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 245: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 246: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 247: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 248: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 249: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 250: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 251: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 252: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 253: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 254: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 255: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 256: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 257: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 258: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 259: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 260: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 261: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 262: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 263: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 264: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 265: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 266: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 267: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 268: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 269: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 270: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 271: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 272: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 273: If the equipment used is not a TRANSDUCER ASSEMBLY, it should be indicated for Transducer or associated capsule use.

NOTE 27

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to TIS.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{p}}$              | 37.14% |
| $P_{\text{r}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MJ               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1: Only use these values per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3: Information (not) to be provided regarding TTC for any TRANSDUCER ASSEMBLY not provided for transducer or received acoustic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the following control section.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to TIS.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{p}}$              | 37.14% |
| $P_{\text{r}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MJ               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

| NOTE 2 Index should be entered for all surface and below surface tests in the column related to TIS or TIB.                                                            |                                    |                       |               |            |               |              |            |               |      |              |  |
| NOTE 3 Index should be entered for all surface and below surface tests in the column related to TIS or TIB.                                                            |                                    |                       |               |            |               |              |            |               |      |              |  |
| NOTE 4 If the measurement of 201.12 (1.26) cm are not required to enter any data in the columns related to TIS, TIB or TTC.                                            |                                    |                       |               |            |               |              |            |               |      |              |  |
| NOTE 5 If the measurement of 201.12 (1.26) cm are not required to enter any data in the column related to TIB.                                                         |                                    |                       |               |            |               |              |            |               |      |              |  |
| NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section. |                                    |                       |               |            |               |              |            |               |      |              |  |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to M.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_a$                       | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| M                | 20% or 0.2, whichever larger |
| T                | 40% or 0.4, whichever larger |

| Flow Area Lock                                                                                                                                                          | n/a                   | n/a        |               |            |               | n/a    |              |  |  |  |  |
| NOTE 1: Only one operating condition per index.                                                                                                                         |                       |            |               |            |               |        |              |  |  |  |  |
| NOTE 2: Data should be entered for at surface and below surface both in the column related to TIS or TIB.                                                               |                       |            |               |            |               |        |              |  |  |  |  |
| NOTE 3: Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial Doppler uses.                            |                       |            |               |            |               |        |              |  |  |  |  |
| NOTE 4: If the requirements of 201-12.4.26) are met, it is not required to enter any data in the column related to TIS, TIB or TTC.                                     |                       |            |               |            |               |        |              |  |  |  |  |
| NOTE 5: If the requirements of 201-12.4.26) are met, it is not required to enter any data in the column related to MT.                                                  |                       |            |               |            |               |        |              |  |  |  |  |
| NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating condition section. |                       |            |               |            |               |        |              |  |  |  |  |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to M.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_a$                       | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| M                | 20% or 0.2, whichever larger |
| T                | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per Index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TTS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TIB, TTS or TIC.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to TIB.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating control section.

ARIETTA 50

Convex

Acoustic power is controllable by the user.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{pk}}$             | 37.14% |
| $P_{\text{r}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{pk}}$             | 37.14% |
| $P_{\text{r}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTX or TTX.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcutaneous or noncutaneous implants cases.

NOTE 4: If the requirements of 201.17.2.2.2 are met, it is not required to enter any data in the columns related to TTX, TB or TIC.

NOTE 5: If the requirements of 201.17.2.2.3 are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "-" indicates cells where a numerical value should be entered. The padlock icon in the index has to be entered in the operating cell section.

**Flow Area Lock**

NOTE 1: Only one operating condition per motor.

**NOTE 3** Information need not be provided concerning TIC for any TRAMON WITH A GSELMAN V and indicated for nonconnected nonconnected nonconnected cases.

NOTE 4. If the measurements of 301 A 2-3 are used, it is not recommended to either use data in the red zone indicated in T10, T18 or T1C. If the measurements of 301 A 2-3 are used, it is not recommended to either use data in the red zone indicated in T10, T18 or T1C.

NOTE 6. If the measurements of 201.53.4.26a) were used, it is not necessary to enter new data in the columns related to M1.

FOI is a fee requirement of 2011, 2012-2013) are not required to submit any data at the counties remaining to be.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $p$                         | 25.00% |
| $I_{\mu}$                   | 37.14% |
| $n$                         | 4.875% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

| Triplets VFL Range                                        | n/a     | n/a     | n/a     | n/a     |
| Pulse Area Lock                                           | n/a     | n/a     | n/a     | n/a     |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TTS or T7B.

NOTE 3: Information need not be included regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal applications.

NOTE 4: If the requirements of 201/12.4,20) are met, it is not required to enter any data in the columns related to TTS, T7B or TTC.

NOTE 5: If the requirements of 201/12.4,20) are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "-" indicates cells where a numerical value should be entered. This equipment setting related to the index has to be entered in the operating cell section.

NOTE 1: Only one assembly condition was tested.

NOTE 1 Only one operating condition per index.

NOTE 3 Information need not be completed concerning TAC for non-TRANSPICER ASSEMBLY Y not intended for biomedical or commercial metabolic uses.

NOTE: A manufacturer needs not be provided regarding TFC for any POWERBOOK ASSEMBLY not intended for sale in the United States or Mexico.

NOTE 4. If the requirements of 201.12.4.3(a) are met, it is not required to submit any data to the contractor's remaining 201.12.4.3(b) and 201.12.4.3(c) are met. If the two documents of 201.12.4.3(b) are met, it is not required to submit any data to the contractor's remaining 201.12.4.3(c).

For all business enquiries visit us online [fishbase.org](http://www.fishbase.org) or contact your local FishBase office (<http://www.fishbase.org/office>). We're here to assist you with all your fish-related queries.

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3: Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4: If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5: If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to TIS.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $f_p$                       | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3: Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4: If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5: If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to TIS.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $f_p$                       | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1: Only use these tags

NOTE 2: This table should be used for all surfaces and below surface both. It is the reference value for TTS or T7C.

NOTE 3: The values in the table are for the operating TTS or T7C. The values in the table are for the operating TTS or T7C.

NOTE 4: The values in the table are for the operating TTS or T7C. The values in the table are for the operating TTS or T7C.

NOTE 5: The values in the table are for the operating TTS or T7C. The values in the table are for the operating TTS or T7C.

NOTE 6: The values in the table are for the operating TTS or T7C. The values in the table are for the operating TTS or T7C.

NOTE 7: The values in the table are for the operating TTS or T7C. The values in the table are for the operating TTS or T7C.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or T7B.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TTS, T7B or T7C.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to MT.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P_r$                       | 25.00% |
| $I_{p,r}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| T7               | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per Index.

NOTE 2: Index label not intended for all Indexes and Index surface both in the columns related to T7S or T7B.

NOTE 3: Information not intended for all Indexes and Index surface both in the columns related to T7S, T7B or T7C.

NOTE 4: If the requirements of 201-12.4.2(a) are not met, it is not valid to enter any data in the columns related to T7S, T7B or T7C.

NOTE 5: If the requirements of 201-12.4.2(b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating cell section.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or T7B.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TTS, T7B or T7C.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to MT.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P_r$                       | 25.00% |
| $I_{p,r}$                   | 37.14% |
| $P_r$                       | 18.75% |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTB or TBL.

NOTE 3: Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transomitted or received acoustic waves.

NOTE 4: If the requirements of 2017.12.4.2.3) are met, it is not required to enter any data in the columns related to TTB, TBL or TTC.

NOTE 5: If the requirements of 2017.12.4.2.3) are met, it is not required to enter any data in the columns related to MT.

NOTE 6: "+" indicates cells where a normalized value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        | Display accuracy |
|-----------------------------|--------|------------------|
| $P$                         | 25.00% | MT               |
| $f_{ref}$                   | 37.14% | TT               |
| $P_s$                       | 18.75% |                  |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TTS or TT.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or nonmedical cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TT, or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "+" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |  |
|-----------------------------|--------|--|
| $P$                         | 25.00% |  |
| $I_{\text{ref}}$            | 37.14% |  |
| $P_{\text{ref}}$            | 18.75% |  |

| Display accuracy |                              |  |
|------------------|------------------------------|--|
| MI               | 20% or 0.2, whichever larger |  |
| TT               | 40% or 0.4, whichever larger |  |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TTS or TT.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or nonmedical cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TT, or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "+" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |  |
|-----------------------------|--------|--|
| $P$                         | 25.00% |  |
| $I_{\text{ref}}$            | 37.14% |  |
| $P_{\text{ref}}$            | 18.75% |  |

| Display accuracy |                              |  |
|------------------|------------------------------|--|
| MI               | 20% or 0.2, whichever larger |  |
| TT               | 40% or 0.4, whichever larger |  |

Данные по акустической мощности

NOTE 1 Only use these tags for all data below surface both in the columns related to TTS or TIB.

NOTE 2 Data should be provided for all data below surface both in the columns related to TTS or TIB.

NOTE 3 Information should not be provided regarding TTS for any TRANSDUCER ASSURANCE not intended for transducer or nontransducer applications.

NOTE 4 If the measurements of 201.12.4.20 are not, it is not required to enter any data in the columns related to TTS, TIB or TTC.

NOTE 5 If the measurements of 201.12.4.20 are not, it is not required to enter any data in the columns related to MT.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating cell section.

NOTE 1: Only use for the following values

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTS or TIB.

NOTE 3: Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal applications.

NOTE 4: If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to TTS, TIB or TTC.

NOTE 5: If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

NOTE 1: Only use operating conditions per Index  
NOTE 2: Does not include B+Color-mode and below surface both in the columns related to TTS or TR.  
NOTE 3: Information not to be provided regardless TCI for any TRANSDUCER ASSEMBLY and should be transmitted or received separately from.  
NOTE 4: If the implementation of 2017.12.4.2a) are met, it is not required to enter any data in the columns related to TTS, TR or TTC.  
NOTE 5: If the implementation of 2017.12.4.2b) are met, it is not required to enter any data in the columns related to MT.  
NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating TR section.

NOTE 1: Only use for the following values

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTS or TIB.

NOTE 3: Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal applications.

NOTE 4: If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to TTS, TIB or TTC.

NOTE 5: If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | NOTE 2: Data not to be used for at surface and below surface both in the columns related to TIS or TIB. |            |     |      |     |      |     |         |     |  |  |
| NOTE 3: Information not provided regarding TIC for any TRANSDUCER ASSEMBLY. Not intended for transponders or non-cylindrical capillary tubes. NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for measurement or reported capital use.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |  |        |
|-----------------------------|--|--------|
| $P$                         |  | 25.00% |
| $I_{meas}$                  |  | 37.14% |
| $P_1$                       |  | 18.75% |

| Display accuracy |  |                              |
|------------------|--|------------------------------|
| MI               |  | 20% or 0.2, whichever larger |
| TI               |  | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for measurement or reported capital use.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |  |        |
|-----------------------------|--|--------|
| $P$                         |  | 25.00% |
| $I_{meas}$                  |  | 37.14% |
| $P_1$                       |  | 18.75% |

| Display accuracy |  |                              |
|------------------|--|------------------------------|
| MI               |  | 20% or 0.2, whichever larger |
| TI               |  | 40% or 0.4, whichever larger |

|                      | Flow Area Lock         | n/a    |            |               |  |            |               |  |      |
|                      | Flow Area Lock         | n/a    |            |               |  |            |               |  |      |

NOTE 1: Only use these values for flow below

NOTE 2: Data should be used for surface and below surface both in the columns related to TIS or TIB

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for piezoelectric or resonant capacitive uses.

NOTE 4: If the requirements of 2017.12.4.20 are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5: If the requirements of 2017.12.4.20 are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the value has to be entered in the operating cell section.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{ref}}$            | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or intracranial Doppler uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to ME.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_{100}$                   | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1: Only use operating condition per index.

NOTE 2: Data should be entered at all other and below surface both in the columns related to TTS or TIB.

NOTE 3: Data should be entered at all other and below surface both in the columns related to TIB, TIB or TTC.

NOTE 4: If flow search method is not used, it is not required to enter any data in the columns related to TIB, TIB or TTC.

NOTE 5: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 6: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 7: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 8: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 9: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 10: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 11: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 12: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 13: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 14: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 15: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 16: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 17: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 18: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 19: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 20: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 21: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 22: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 23: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 24: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 25: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 26: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 27: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 28: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 29: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 30: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 31: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 32: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 33: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 34: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 35: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 36: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 37: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 38: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 39: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 40: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 41: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 42: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 43: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 44: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 45: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 46: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 47: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 48: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 49: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 50: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 51: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 52: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 53: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 54: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 55: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 56: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 57: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 58: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 59: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 60: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 61: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 62: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 63: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 64: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 65: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 66: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 67: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 68: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 69: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 70: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 71: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 72: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 73: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 74: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 75: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 76: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 77: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 78: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 79: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 80: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 81: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 82: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 83: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 84: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 85: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 132: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 133: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 134: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 135: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 136: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 137: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 138: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 139: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 140: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 141: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 142: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 143: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 144: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 145: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 146: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 147: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 148: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 149: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 150: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 151: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 152: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 153: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 154: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 155: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 156: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 157: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 158: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 159: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 160: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 161: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 162: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 163: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 164: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 165: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 166: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 167: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 168: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 169: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 170: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 171: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 172: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 173: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 174: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 175: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 176: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 177: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 178: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 179: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 180: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 181: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 182: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 183: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 184: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 185: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 186: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 187: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 188: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 189: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 190: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 191: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 192: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 193: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 194: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 195: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 196: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 197: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 198: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 199: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 200: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 201: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 202: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 203: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 204: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 205: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 206: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 207: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 208: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 209: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 210: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 211: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 212: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 213: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 214: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 215: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 216: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 217: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 218: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 219: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 220: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 221: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 222: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 223: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 224: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 225: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 226: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 227: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 228: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 229: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 230: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 231: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 232: If the implementation of 2017.12.4.20 is not used, it is not required to enter any data in the columns related to M.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or intracranial Doppler uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to ME.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_{100}$                   | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

Данные по акустической мощности

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "n/a" indicates data where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{FMS}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "n/a" indicates data where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{FMS}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surfaces and below surface both in the columns related to TTS or TTB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.13.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TTB or TTC.

NOTE 5 If the requirements of 201.13.4.2(b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $f_{avg}$                   | 37.14% |
| $P_{1st}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per Index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TTB.

NOTE 3 If information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal synaptic uses.

NOTE 4 If the requirements of 201.12.4.4(a) are met, it is not required to enter any data in the columns related to TTB, TTB or TTC.

NOTE 5 If the requirements of 201.12.4.4(b) are met, it is not required to enter any data in the column related to TTB.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the Index Item to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |
|                  |                              |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TTB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial Doppler uses.

NOTE 4 If the requirements of 201.12.4.26) are met, it is not required to enter any data in the columns related to TTS, TTB or TTC.

NOTE 5 If the requirements of 201.12.4.26) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $f_{101}$                   | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TTB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial Doppler uses.

NOTE 4 If the requirements of 201.12.4.26) are met, it is not required to enter any data in the columns related to TTS, TTB or TTC.

NOTE 5 If the requirements of 201.12.4.26) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $f_{101}$                   | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

| $z_{10000000}$        |                              | (cm)       |       | F3            |     | F3         |     |  |
| $z_{100000000}$       |                              | (cm)       |       | F3            |     | F3         |     |  |
| $z_{1000000000}$      |                              | (cm)       |       | F3            |     | F3         |     |  |

NOTE 1: Only use operating condition per index.

NOTE 2: Values are for the surface and below surface both in the columns related to TTS or TR.

NOTE 3: Values are for the surface and below surface both in the columns related to TTS or TR.

NOTE 4: If the requirements of 201:12.4.2(2) are not met, it is not required to enter any data in the columns related to TTS, TR or TTC.

NOTE 5: If the requirements of 201:12.4.2(2) are not met, it is not required to enter any data in the columns related to M.

NOTE 6: "n" indicates cells where a numerical value should be entered. The equipment related to the index has to be entered in the operating control section.

Данные по акустической мощности

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TB.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $I_p$                       | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TB.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $I_p$                       | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

| Sample gate depth (cm)        |                      | 6.4   | 6.4        |               | 0.4        |               | 0.0        |
| Triplets Frame Rate           |                      | n/a   | n/a        |               | n/a        |               | n/a        |
| Triplets VTE Range            |                      | n/a   | n/a        |               | n/a        |               | n/a        |
| Flow Area Lock                |                      | n/a   | n/a        |               | n/a        |               | n/a        |

NOTE 1: Only one scanning cycle per index

NOTE 2: Data should be provided for flow and laser surface both in the columns related to TS or TR

NOTE 3: Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial Doppler uses

NOTE 4: For the implementation of 201 (12.4.20), see next, it is not required to enter any data in the columns related to TTS, TR or TTC.

NOTE 5: If the implementation of 201 (12.4.20) are not, it is not required to enter any data in the columns related to MI.

NOTE 6: "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the scanning control section.

Flow Area Lock

the operating condition per index.

would be entered for at surface and below surface both in the columns related to T15 or T18.

Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to M1.

values cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\mu}$                   | 37.14% |
| $\sigma$                    | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| M/I              | 20% or 0.2, whichever larger |
| T/I              | 40% or 0.4, whichever larger |

| Flow Area Lock               | (cm)                                                           | n/a    | n/a        | n/a           | n/a        | n/a           |       |

NOTE 1: Only one scanning per inch per inch.

NOTE 2: Data should not be used for surface and below surface both in the columns related to TTS or TB.

NOTE 3: Information must not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for Intransducer or nontransducer uses.

NOTE 4: If the requirements of 201:12.4.20) are met, it is not required to enter any data in the columns related to TTS, TTB or TTC.

NOTE 5: If the requirements of 201:12.4.20) are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "n/a" indicates cells where a numerical value should be entered. This equipment shall be entered in the Index file to be entered in the scanning control section.

NOTE 1 Only one operating condition per Index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TBS.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4. If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns headed 115, 116 or 117.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TTB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to TTS, TTB or TIC.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "v" indicates cable where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P_r$                       | 25.00% |
| $I_{r,s}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TTB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to TTS, TTB or TIC.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "v" indicates cable where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P_r$                       | 25.00% |
| $I_{r,s}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

Acoustic output data in accordance with IEC 61157/4.2.2, accompanying literature

ARIETTA 50

C22K Convex

Acoustic power is controllable by the user.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or T7B.

NOTE 3 Information need not be provided regarding T7C for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal applications.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, T7B or T7C.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the index has to be entered in the index control section.

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TTS or T7B.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, T7B or T7C.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TTS, T7B or T7C.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |

| Flow Area Lock               | Sample gate size       | n/a    | n/a    | n/a    |  |        |
|                              | Sample gate depth      | n/a    | n/a    | n/a    |  |        |
|                              | Triplets Frame Rate    | n/a    | n/a    | n/a    |  |        |
|                              | Triplets VIL Range     | n/a    | n/a    | n/a    |  |        |
|                              | Flow Area Lock         | n/a    | n/a    | n/a    |  |        |

NOTE 1: Only use these tags: `MI`, `TTS`, `TTB`, `T7C`.

NOTE 2: Data should be entered for all surface and lateral surface both in the columns related to TTS or TTB.

NOTE 3: Information need not be provided for all parameters. Reporting T7C for any TRANSDUCER ASSEMBLY not intended for longitudinal or nonaxial applications.

NOTE 4: If the requirements of 201-13.1.2 are met, it is not required to enter any data in the columns related to TTS, TTB or T7C.

NOTE 5: If the requirements of 201-13.1.2 are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the setting control section.

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TTS or T7B.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, T7B or T7C.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TTS, T7B or T7C.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| T7               | 40% or 0.4, whichever larger |

NOTE 1: Only use operating condition per index.

NOTE 2: Information related to the index label and below surface both is the column related to TIB or TH.

NOTE 3: Information related to the index label and below surface both is the column related to TIB or TH.

NOTE 4: If the requirements of 2011 (2.2.2) are met, it is not required to enter any data in the column related to TIB, TH or TTC.

NOTE 5: If the requirements of 2011 (2.2.2) are met, it is not required to enter any data in the column related to MI.

NOTE 6: "n/a" indicates cells where a numerical value shall be entered. The equipment setting related to the index has to be entered in the option section.

NOTE 1 Only one operating condition per Index.

NOTE 2 Data should be entered for at surface and below surface both in the column related to TIB or TIB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to TTS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2c) are met, it is not required to enter any data in the column related to MI.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |

|                              |                                                                   |         |            |               |            |               |         |
|                              |                                                                   |         |            |               |            |               |         |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered in the column below surface both in the columns related to TIB or TIB.

NOTE 3: Index should be entered in the column below surface both in the columns related to TIB or TIB.

NOTE 4: If the requirements of 201: 12.4-20) are used, it is not required to enter any data in the columns related to TTS, TIB or TTC.

NOTE 5: If the requirements of 201: 12.4-20) are used, it is not required to enter any data in the columns related to MI.

NOTE 6: "-" indicates cells where a numerical value should be entered. This equipment/setting related to the index has to be entered in the operating control section.

NOTE 1 Only one operating condition per Index.

NOTE 2 Data should be entered for at surface and below surface both in the column related to TIB or TIB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to TTS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2c) are met, it is not required to enter any data in the column related to MI.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{pr}}$             | 37.14% |
| $P_{\text{a}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TZS or TZB.

NOTE 3: Information used is not provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TZB, TZS or TTC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |
|-----------------------------|--------|
| $p$                         | 25.00% |
| $f_p$                       | 37.14% |
| $f_{\text{ave}}$            | 48.75% |

Display accuracy

MT 20% or 0.2, whichever larger

TZ 40% or 0.4, whichever larger

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.3a) are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amd.1)

| Transducer Model                                              | L442       | MODE          | B/W/D-Mode    |
|---------------------------------------------------------------|------------|---------------|---------------|
| Index Label                                                   | MT         | TDS           | TTB           |
| Maximum Index Value                                           | at surface | below surface | below surface |
| Index Component Value                                         | 0.36       | 0.33          | 1.3           |
|                                                               | 1.6        | 0.36          | 1.3           |
| $P_{ref}$ (MPa)                                               | 3.8        |               |               |
| $P$ (mW)                                                      | 15         | 15            | 14            |
| $P_{101}$ (mW)                                                | 15         | 15            | 14            |
| $z_1$ (cm)                                                    |            | 0.45          |               |
| $z_2$ (cm)                                                    |            |               | 1.5           |
| $z_{ref}$ (cm)                                                | 1.7        |               |               |
| $z_{101}$ (cm)                                                | 1.7        |               |               |
| $f_{ref}$ (MHz)                                               | D-5.74     | B-4.8, D-5    | B-4.8, D-5    |
| $f_{101}$ (Hz)                                                | 1004       |               |               |
| $f_{101}$ (Hz)                                                | 5.3        |               |               |
| $n_{ref}$                                                     | 2.0        |               |               |
| $I_{P_{ref}}$ at $z_{ref}$ (W/cm <sup>2</sup> )               | 924        |               |               |
| $I_{P_{101}}$ at $z_{101}$ (W/cm <sup>2</sup> )               | 397        |               |               |
| $I_{P_{ref}}$ at $z_{ref}$ or $z_{101}$ (mW/cm <sup>2</sup> ) | 788        |               |               |
| $P_{ref}$ at $z_{ref}$ (MPa)                                  | 5.2        |               |               |
| FWHM (%)                                                      | 100        | 100           | 100           |
| TT Mode                                                       | B/W        | B/W           | B/W           |
| Wave Mode                                                     | THDP-1     | THDP-1        | THDP-1        |
| Frequency (B)                                                 | Preset     | Reso          | Preset        |
| Focus (B)                                                     | F1         | F1            | F1            |
| Scan/6 (B)                                                    | 100        | 25            | 25            |
| Range (cm)                                                    | 14.0       | 2.0           | 3.5           |
| PRF Limit                                                     | ON         | OFF           | OFF           |
| Line Density                                                  | Low        | Medium        | High          |
| Flow Mode                                                     | n/a        | n/a           | n/a           |
| Ref. Frequency (Color)                                        | n/a        | n/a           | n/a           |
| Focus (Color)                                                 | n/a        | n/a           | n/a           |
| Flow/6 (Color)                                                | n/a        | n/a           | n/a           |
| Color Velocity Range (cm/s)                                   | n/a        | n/a           | n/a           |
| Pixel Size                                                    | n/a        | n/a           | n/a           |
| Flow Area Depth                                               | n/a        | n/a           | n/a           |
| Color Line Density                                            | n/a        | n/a           | n/a           |
| Pre Mode                                                      | PW         | PW            | PW            |
| High PRF                                                      | OFF        | OFF           | OFF           |
| Ref. Frequency (D)                                            | Reso       | Std           | Std           |
| Focus (D)                                                     | F5         | F5            | F1            |
| Droplet Velocity Range (cm/s)                                 | 6.23       | 132.81        | 39.84         |
| Sample gate size (cm)                                         | 0.1        | 0.1           | 0.1           |
| Sample gate length (cm)                                       | 2.4        | 0.0           | 0.0           |
| Triplex Frame Rate                                            | n/a        | n/a           | n/a           |
| Triplex VEL Range                                             | n/a        | n/a           | n/a           |
| Flow Area Lock                                                | n/a        | n/a           | n/a           |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TDS or TTB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transducer or resonant cup-like cases.

NOTE 4: If the measurements of 201,12,4,2,61 are not, it is not required to enter any data in the column related to TDS, TTB or TIC.

NOTE 5: If the measurements of 201,12,4,2,61 are not, it is not required to enter any data in the column related to MT.

NOTE 6: "n/a" indicates cells where a numerical value should be entered. This equipment setting related to the index has to be entered in the rating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\mu}$                   | 37.14% |
| $n$                         | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

Flow Area Lock

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TBL.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TSS, TSS or TSC.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to ME.

every 8 h, 0.2% indomethacin cells should be entered. The non-dosed surface related to the index has to be entered in the non-dosed control section.

**ARIETTA 50**

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amd.1)

| Transducer Model      |                                             | L442                  |       | MODE       |               | M4-Caler-Mode |            |               |        |
|-----------------------|---------------------------------------------|-----------------------|-------|------------|---------------|---------------|------------|---------------|--------|
| Index Label           |                                             | MT                    | TTS   | at surface | below surface | TTB           | at surface | below surface | TTC    |
| Maximum Index Value   |                                             | 1.6                   | 0.35  | 0.35       | 0.28          | 1.3           | 0.25       | 1.3           | 1.1    |
| Index Component Value |                                             |                       |       |            |               |               |            |               |        |
| Acoustic Parameters   | $P_{ave}$                                   | (MPa)                 |       |            |               |               |            |               |        |
|                       | $P_{rms}$                                   | (mW)                  | 3.8   |            |               |               |            |               |        |
|                       | $P_{1st}$                                   | (mW)                  |       | 13         |               | 13            |            |               | 13     |

|                       |                                             |                       |       |            |               |               |            |               |        |
|                       |                                             |                       |       |            |               |               |            |               |        |

NOTE 1: Only one operating condition per Index.

NOTE 2: Index should be entered for all surface and below surface tests in the columns related to TTS or TTB.

NOTE 3: Index should be entered for all surface and below surface tests in the columns related to TTS or TTB.

NOTE 4: If the requirements of 2011.12.4.2b are met, it is not required to enter any data in the columns related to TTS, TTB or TTC.

NOTE 5: If the requirements of 2011.12.4.2b are met, it is not required to enter any data in the column related to MT.

NOTE 6: "-" indicates cells where a numerical value will not be entered. The equipment setting related to the Index has to be entered in the setting context section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 26.00% |
| $I_{\mu}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per Index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to T10 or T18.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201, 12.4.2(a) are met, it is not required to enter any data in the columns related to T13, T18 or T1C.

NOTE 5 If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to M1.

NOTE: ~ indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

Table 201.103 – Acoustic output reporting table (IEC 60061-2:37 Ed.2 Amd.1)

| Transducer Model             | Index Label           | MT    | MODE |            |      | T7C |
|------------------------------|-----------------------|-------|------|------------|------|-----|
|                              |                       |       | TTS  | at surface | T7B  |     |
|                              | Maximum Index Value   | 1.6   | 0.37 | 0.35       | 0.28 | 1.3 |
|                              | Index Component Value |       | 0.37 | 0.35       | 0.28 | 1.3 |
| Acoustic Parameters          | $P_{ref}$ (MPa)       | 3.8   |      |            |      |     |
|                              | $P$ (mW)              |       | 15   |            | 14   | 14  |
|                              | $P_{10}$ (mW)         |       | 15   |            | 14   |     |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTS or T7B.

NOTE 3: Information need not be provided regarding T7C for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TTS, T7B or T7C.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to T7C.

NOTE 6: "-" indicates cells where a numerical value should be entered. The replacement setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_p$                       | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| T7               | 40% or 0.4, whichever larger |

|                              | Sample gate depth                       | (cm)                  |  | n/a    |  | n/a    |  | n/a    |
|                              | Triplets Frame Rate                     | n/a                   |  | n/a    |  | n/a    |  | n/a    |
|                              | Triplets VFL Range                      | n/a                   |  | n/a    |  | n/a    |  | n/a    |
|                              | Flow Area Lock                          | n/a                   |  | n/a    |  | n/a    |  | n/a    |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be obtained for all surface and below surface both in the columns related to TIB or TBL.

NOTE 3: Information used not be provided regarding TIC for all surface and below surface both in the columns related to THP(L) or THP(L).

NOTE 4: If the requirements of 201.12.2.20 are met, it is not required to enter any data in the columns related to TIB, TBL or TIC.

NOTE 5: If the requirements of 201.12.2.20 are met, it is not required to enter any data in the column related to MT.

NOTE 6: "n/a" indicates data where a numerical value should be entered. The equipment setting related to the index has to be entered in the setting control section.

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TTS or TIB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TIB or TIC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| I <sub>p</sub>              | 37.14% |
| P <sub>s</sub>              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| T <sub>T</sub>   | 40% or 0.4, whichever larger |

| Flow Area Lock               |                                                                                    | n/a       | n/a        | n/a           | n/a        | n/a           | n/a    |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3: Information (not) to be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or intracranial cephalic uses.

NOTE 4: If the requirements of 2011-12-26b are met, it is not required to enter any data in the columns related to TIB, TIB or TIC.

NOTE 5: If the requirements of 2011-12-26b are met, it is not required to enter any data in the columns related to BIL.

NOTE 6: "+" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the setting control section.

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TTS or TIB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TIB or TIC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MT.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| I <sub>p</sub>              | 37.14% |
| P <sub>s</sub>              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| T <sub>T</sub>   | 40% or 0.4, whichever larger |

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amend.1)

| Transducer Model      | L55                                                       |     | MODE           |                | PWB-Mode          |                   |

|                       | Triplets Frame Rate                                       | n/a | n/a            | n/a            | n/a               | n/a               |
|                       | Triplets VIL Range                                        | n/a | n/a            | n/a            | n/a               | n/a               |
|                       | Flow Area Lock                                            | n/a | n/a            | n/a            | n/a               | n/a               |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided reporting TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal Doppler uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $f_{ref}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided reporting TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal Doppler uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| P                           | 25.00% |
| $f_{ref}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TTC              | 40% or 0.4, whichever larger |

Данные по акустической мощности

NOTE 1 Only use these conditions per issue.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information used can be provided regarding TTC for any TRANSDUCER ASSEMBLY not included for transcranial or noncranial asphaltic uses.

NOTE 4 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to TIS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.20) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "+" indicates cells where a corrected value should be entered. This equipment setting should be entered in the column box to be entered in the operating control section.

Measurement Uncertainty (%)

P 25.00%

I<sub>p</sub> 37.14%

n 19.25%

Display accuracy

MI 20% or 0.2, whichever larger

TI 40% or 0.4, whichever larger

NOTE 1 Only one operating condition per index.  
NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TIB.  
NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.  
NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TTS, TIB or TTC.  
NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to TTS, TIB or TTC.  
NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.  
NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TTS, TIB or TTC.  
NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to TTS, TIB or TTC.  
NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{rms}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| T7               | 40% or 0.4, whichever larger |

Данные по акустической мощности

|                              | Ref. Frequency (D)                                       | n/a      | n/a  | n/a        | n/a           | n/a      |
|                              | Focus (D)                                                | n/a      | n/a  | n/a        | n/a           | n/a      |
|                              | Doppler Velocity Range (cm/s)                            | n/a      | n/a  | n/a        | n/a           | n/a      |
|                              | Sample gate size (cm)                                    | n/a      | n/a  | n/a        | n/a           | n/a      |

NOTE 1 Only one operating condition per Index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TTS.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TTS or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{PR}$                    | 37.14% |
| $P_{10}$                    | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TTS              | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per Index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TTS.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TTS or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{PR}$                    | 37.14% |
| $P_{10}$                    | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TTS              | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TTS or TIB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic use.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIB, TTS or TTC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TIB.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |  |
|-----------------------------|--------|--|
| $P$                         | 25.00% |  |
| $f_s$                       | 37.14% |  |
| $P_s$                       | 18.75% |  |

| Display accuracy |                              |  |
|------------------|------------------------------|--|
| MT               | 20% or 0.2, whichever larger |  |
| TT               | 40% or 0.4, whichever larger |  |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TTS or TIB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic use.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIB, TTS or TTC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TIB.

NOTE 6: "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |  |
|-----------------------------|--------|--|
| $P$                         | 25.00% |  |
| $f_s$                       | 37.14% |  |
| $P_s$                       | 18.75% |  |

| Display accuracy |                              |  |
|------------------|------------------------------|--|
| MT               | 20% or 0.2, whichever larger |  |
| TT               | 40% or 0.4, whichever larger |  |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TTS or TIB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to M.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $F_{\text{in}}$             | 37.14% |
| $P_{\text{in}}$             | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| $M$              | 20% or 0.2, whichever larger |
| $T$              | 40% or 0.4, whichever larger |

|                  | Flow Area Lock                                            | n/a    | n/a        | n/a           | n/a        | n/a     |
|                  | Flow Area Lock                                            | n/a    | n/a        | n/a           | n/a        | n/a     |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TBL.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TBL or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |
|-----------------------------|--------|
| $P_{ref}$                   | 25.00% |
| $f_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

|                  | Flow Area Lock                                            | n/a    | n/a        | n/a           | n/a        | n/a     |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TBL.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TBL or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |
|-----------------------------|--------|
| $P_{ref}$                   | 25.00% |
| $f_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TIS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to MI.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{a}}$              | 37.14% |
| $P_{\text{r}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TIS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to MI.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{a}}$              | 37.14% |
| $P_{\text{r}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per Index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTS or TR.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal capillary uses.

NOTE 4: If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TTS, TR or TIC.

NOTE 5: If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to MI.

NOTE 6: "-" indicates data when a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

**NOTE 1** Only new inventions involving our business

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TIS or TBS.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic use.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to ME.

NOTE: 0 " indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{pl}}$             | 37.14% |

| Display accuracy |                              |
|------------------|------------------------------|
| $M/I$            | 20% or 0.2, whichever larger |
| $T/I$            | 40% or 0.4, whichever larger |

Flow Area Lock

NOTE 2: Data should be entered for all surface and bottom surface both in the columns related to T10 and T100.

**NOTE 3:** Information need not be provided regarding TC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cranial use.

NOTE 4 If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to ML.

NOTE: \* indicates cells where a numerical value should be entered. The asterisk should be entered in the remaining control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{Fe}}$             | 37.14% |

Данные по акустической мощности

213 / MN1-6464RU ред. 6

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_p$                       | 37.14% |
| $n$                         | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| <i>MI</i>        | 20% or 0.2, whichever larger |
| <i>TI</i>        | 40% or 0.4, whichever larger |

NOTE 8: "\*" indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating control section.

NOTE 5. If the requirements of 201.12.4.2b) are met, it is not required to enter any data in the column related to ML.

NOTE: 0 ~" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amd.1)

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TIB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TIB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "+" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P_r$                       | 25.00% |
| $I_{p,0}$                   | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| T                | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per mode.

NOTE 2 Data should be entered for at surface and below surface both in the column related to TTS or TTB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TTS, TTB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to MT.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_p$                       | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

| Triplex Frame Rate     | n/a                   | n/a      | n/a      | n/a      | n/a                   | n/a      | n/a      | n/a      |
| Triplex VEL Range      | n/a                   | n/a      | n/a      | n/a      | n/a                   | n/a      | n/a      | n/a      |
| Flow Area Lock         | n/a                   | n/a      | n/a      | n/a      | n/a                   | n/a      | n/a      | n/a      |

NOTE 1 Only one operating condition per mode.

NOTE 2 Data should be entered for at surface and below surface both in the column related to TTS or TTB.

NOTE 3 Information need not be provided regarding TTC for any TRANSDUCER ASSEMBLY not intended for transcranial or noncranial cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TTS, TTB or TTC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to MT.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_p$                       | 37.14% |
| $P_1$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to MI.

NOTE 6 "+" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTS or TTB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TTB or TIC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TIC.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{prf}}$            | 37.14% |
| $P_{\text{a}}$              | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

|                              | Flow Area Lock                                                                | n/a      | n/a         | n/a         | n/a         |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TTS or TTB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TTS, TTB or TIC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TIC.

NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or non-invasive applications.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TTS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to TIC.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_{\text{HLL}}$            | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TTS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or non-invasive applications.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the column related to TTS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to TIC.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $f_{\text{HLL}}$            | 37.14% |
| $P_r$                       | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TT               | 40% or 0.4, whichever larger |

|                              | Flow Area Lock                     |                       | n/a  |      | n/a   |          | n/a   |     | n/a   |  |

NOTE 1: Only one operating condition per index.

NOTE 2: Data should be entered for all indices and below surface both in the columns related to TIS or TIB.

NOTE 3: Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY and is provided for transducer or nontransducer applications.

NOTE 4: If the requirements of 201.2.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5: If the requirements of 201.2.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6: "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the setting control section.

NOTE 1. Only one operating condition per index.

NOTE 2. Data should be entered for at surface and below surface both in the column related to TIS or TIB.

NOTE 3. Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal cephalic uses.

NOTE 4. If the requirements of 201.12.4.3a) are met, it is not required to enter any data in the column related to TIS, TIB or TIC.

NOTE 5. If the requirements of 201.12.4.3b) are met, it is not required to enter any data in the column related to MI.

NOTE 6. "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{ref}$                   | 37.14% |
| $P_{ref}$                   | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| TIC              | 40% or 0.4, whichever larger |

|                              | Triplets Frame Rate                 | (cm)      | n/a    |      |  |        |  |      |  |
|                              | Triplets VELL Range                 | (cm)      | n/a    |      |  |        |  |      |  |
|                              | Flow Area Lock                      | (cm)      | n/a    |      |  |        |  |      |  |

NOTE 1: Only one operating condition per index.

NOTE 2: Index label is used for flow and index values both in the columns related to TH or TB.

NOTE 3: Index label is used for flow and index values both in the columns related to TH or TB.

NOTE 4: If the requirements of 201:12.4.2.20 are used, it is not required to enter any data in the column related to TIS, TH or TIC.

NOTE 5: If the requirements of 201:12.4.2.20 are used, it is not required to enter any data in the column related to MI.

Table 201.103 – Acoustic output reporting table (IEC 60601-3-37 Ed.2 Amnd.1)

| Transducer Model             | VC35                                | MODE                  |              |               |            |               | BMPWD-mode   |
|------------------------------|-------------------------------------|-----------------------|--------------|---------------|------------|---------------|--------------|
| Index Label                  |                                     | MI                    | TIS          |               | TIB        |               | TIC          |
| Maximum Index Value          |                                     | 1.6                   | at surface   | below surface | at surface | below surface | 1.6          |
| Index Component Value        |                                     |                       | 0.82         | 0.56          | 0.75       | 2.1           |              |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcutaneous or intracranial catheter use.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to TIS.

NOTE 6 "n/a" indicates cells where a numerical value should be entered. This equipment setting related to the index has to be entered in the operating control section.

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or non-invasive applications.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIB, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\text{p}}$              | 37.14% |
| $P_r$                       | 18.75% |

| Display Accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| T                | 40% or 0.4, whichever larger |

| NOTE 1: Only use the operating conditions shown above for the actual label surface, both in the columns related to TIS or TB.                                     |                                     |                       |            |               |            |               |              |
| NOTE 2: Data not tested and not included for the actual label surface, both in the columns related to TIS or TB.                                                  |                                     |                       |            |               |            |               |              |
| NOTE 3: Information not tested and not included for the actual label surface, both in the columns related to TIS or TB.                                           |                                     |                       |            |               |            |               |              |
| NOTE 4: If the requirements of 2011:12.4.20 are met, it is not required to enter any data in the columns related to TIS, TB or TIC.                               |                                     |                       |            |               |            |               |              |
| NOTE 5: If the requirements of 2011:12.4.20 are met, it is not required to enter any data in the columns related to MI.                                           |                                     |                       |            |               |            |               |              |
| NOTE 6: "-" indicates cells where a numerical value should be entered. The equipment setting related to the value to be entered in the operating control section. |                                     |                       |            |               |            |               |              |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or non-invasive applications.

NOTE 4 If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIB, TIB or TIC.

NOTE 5 If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "v" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement Uncertainty (%) |        |

| Sample gate depth      | n/a      | n/a        |               | n/a        |               | n/a      |
| Triplets Frame Rate    | n/a      | n/a        |               | n/a        |               | n/a      |
| Triplets VCL Range     | n/a      | n/a        |               | n/a        |               | n/a      |
| Flow Arm Lock          | n/a      | n/a        |               | n/a        |               | n/a      |

NOTE 1: Only one operating condition per index

NOTE 2: Data should be entered for all surface and below surface both in the columns related to TDS or TIB

NOTE 3: Information must not be provided regarding TIC for any TRANSCAPAS ASSEMBLY not intended for transcranial or noncranial cephalic scans

NOTE 4: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIB, TIB or TIC

NOTE 5: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to MI

NOTE 6: "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the testing control section.

NOTE 7: Only one operating condition per index

NOTE 8: Data should be entered for all surface and below surface both in the columns related to TDS or TIB

NOTE 9: Information must not be provided regarding TIC for any TRANSCAPAS ASSEMBLY not intended for transcranial or noncranial cephalic scans

NOTE 10: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to TIB, TIB or TIC

NOTE 11: If the requirements of 201.12.4.2(a) are met, it is not required to enter any data in the columns related to MI

NOTE 12: "n/a" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the testing control section.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_{\mu}$                   | 37.14% |
| $P$                         | 18.75% |

| Display accuracy |                              |
|------------------|------------------------------|
| MT               | 20% or 0.2, whichever larger |
| TI               | 40% or 0.4, whichever larger |

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for all surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for intracranial or neonatal cathaptic uses.

NOTE 4: If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to TMS, TTB or TFC.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to ME.

NOTE: 0 " indicates cells where a numerical value should be entered. The equipment setting related to the Index has to be entered in the operating control section.

| Sample gate size                                                                             |  | (cm)    | n/a        |               | n/a        |               | n/a  |
| Sample gate depth                                                                            |  | (cm)    | n/a        |               | n/a        |               | n/a  |
| Triplets Frame Rate                                                                          |  | (cm)    | n/a        |               | n/a        |               | n/a  |
| Triplets VEL. Range                                                                          |  | n/a     | n/a        |               | n/a        |               | n/a  |
| Flow Area Lock                                                                               |  | n/a     | n/a        |               | n/a        |               | n/a  |

NOTE 1 Only one operating condition per below.

NOTE 2 Data must be entered for all three axial plane surfaces both in the column related to TYS or TTB.

NOTE 3 Information must be entered for all three axial plane surfaces both in the column related to TYC or TTB.

NOTE 4 If the measurements of 201.12, 4.20 are met, 1 is not required to enter any data in the column related to TYS, TTB or TYC.

NOTE 5 If the measurements of 201.12, 4.20 are met, 1 is not required to enter any data in the column related to MI.

NOTE 6 "n" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the first empty column.

| measurement uncertainty (%) |        |
|-----------------------------|--------|
| $P$                         | 25.00% |
| $I_H$                       | 37.14% |
| $n$                         | 1.875% |

| Display accuracy |                              |
|------------------|------------------------------|
| MI               | 20% or 0.2, whichever larger |
| IT               | 40% or 0.4, whichever larger |

Flow Area Lock

NOTE 2: Data should be entered for at surface and below surface both in the columns related to TIS or TIR.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for Intracranial or neonatal cephalic uses.

NOTE 4: If the requirements of 201.12.4.2a) are met, it is not required to enter any data in the columns related to T15, T16 or T1C.

NOTE 5: If the requirements of 201.12.4.2(b) are met, it is not required to enter any data in the column related to ML.

NOTE:  $\infty$  indicates cells where a numerical value should be entered. The estimated setting related to the index has to be entered in the ascending control section.

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amd.1)

| Transducer Model                   | VC41V  | MODE       |               |               |     | PWD-Mode |
|------------------------------------|--------|------------|---------------|---------------|-----|----------|
| Index Label                        | MI     | TIS        | TIB           | TTC           |     |          |
| Maximum Index Value                | 1.1    | 0.53       | 1.4           | 1.3           |     |          |
| Index Component Value              |        | at surface | below surface | below surface |     |          |
| $P_{iso}$ (MPa)                    | 2.3    | 0.53       | 0.38          | 1.4           |     |          |
| $P$ (mW)                           |        | 26         | 21            | 23            |     |          |
| $P_{out}$ (mW)                     |        | 24         | 21            |               |     |          |
| $z_s$ (cm)                         |        |            |               |               |     |          |
| $z_{iso}$ (cm)                     | 0.41   |            | 1.3           | 0.69          |     |          |
| $z_{ref}$ (cm)                     | 0.41   |            |               |               |     |          |
| $f_{ref}$ (MHz)                    | 4.5    | 4.6        | 4.1           | 4.5           |     |          |
| $f_{TTS}$ (Hz)                     | 723    |            |               |               |     |          |
| $f_{TIB}$ (Hz)                     | -      |            |               |               |     |          |

NOTE 277: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 278: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 279: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 280: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 281: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 282: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 283: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 284: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 285: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 286: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 287: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 288: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 289: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 290: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 291: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 292: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 293: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 294: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 295: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 296: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 297: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 298: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 299: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 300: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 301: If the transducer is not used for the purpose of the test, the value should be entered as "n/a".

NOTE 1 Only one operating condition per index.

NOTE 2 Data should be entered for at surface and below surface both in the columns related to TIS or TIB.

NOTE 3 Information need not be provided regarding TIC for any TRANSDUCER ASSEMBLY not intended for transcranial or neonatal applications.

NOTE 4 If the requirements of 201.124.20 are met, it is not required to enter any data in the columns related to TIS, TIB or TIC.

NOTE 5 If the requirements of 201.124.20 are met, it is not required to enter any data in the columns related to MI.

NOTE 6 "-" indicates cells where a numerical value should be entered. The equipment setting related to the index has to be entered in the operating control section.

| Measurement uncertainty (%) |        |  |
|-----------------------------|--------|--|
| $P$                         | 25.00% |  |
| $I_P$                       | 37.14% |  |
| $P_r$                       | 18.75% |  |

| Display accuracy |                              |  |
|------------------|------------------------------|--|
| MI               | 20% or 0.2, whichever larger |  |
| T                | 40% or 0.4, whichever larger |  |

Table 201.103 – Acoustic output reporting table (IEC 60601-2-37 Ed.2 Amd.1)

| Transducer Model
